

Your Providenciales Forecast - Sunday, February 05, 2012

Exclusively For:

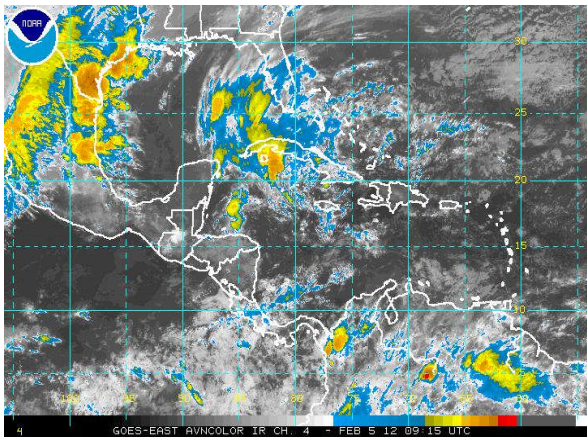

Prepared By:

Ridge of high pressure to the north this morning will weaken through the day as a cold front will be moving s'ward through the w'r'n Atlantic. Areas of low pressure will develop along the front that will extend from the Yucatan Peninsula ne'ward across central Florida through the morning of the 07th. Front will weaken and will move e-se'ward across the se'r'n Bahamas through the morning of the 07th and will then tend to dissipate as broad ridging builds across region. Ridging will be reinforced by high pressure building off of the east coast of the US late this week.

Sunrise: **6:26 AM**
Sunset: **5:39 PM**

High Tide: **12:51 PM**
Low Tide: **7:13 PM**
